INTERVIEW QUESTIONS

Questions for Specialists (ophthalmologists, optometrists):

1. Can you describe your background and experience in diagnosing and treating pathological myopia?
2. How long have you been working in this field, and what percentage of your patients suffer from pathological myopia?
3. What are the primary diagnostic tools or methods you use to detect pathological myopia
4. How do you differentiate between typical myopia and pathological myopia during diagnosis?
5. What treatment options do you usually recommend for patients with pathological myopia
6. what are the main causes for pathological myopia?
7. How has treatment evolved over the years for pathological myopia patients
8. What are the key challenges in diagnosing pathological myopia accurately?
9. What potential do you see in AI or machine learning tools for aiding in the diagnosis of pathological myopia?
10. How would you envision AI supporting specialists in your field?
11. Would it be possible for you to share images that illustrate the differences between patients with pathological myopia and those without?
12. Could you provide examples of anonymized patient images that you've worked on, specifically highlighting cases of pathological myopia?
